AUTHOR: Mitchell, B. F.

TITLE: Finding smooth and sharp extremaums with the aid of electronic computers

SOURCE: Ref. zh. Kibernetika, Abs. 4G362

REF SOURCE: Tr. uchebn. in-tov svyazi. M-vo svyazi SSSR, vyp. 26, 1965, 143-148

TOPIC TAGS: mathematic analysis, electronic computer, algorithm, function analysis

ABSTRACT: The author describes an algorithm for finding the maximum $f(x^*)$ of the function $f(x)$, $a \leq x \leq b$ of a variable, on the premise that $f(x)$ rigorously increases in the interval $[a, x^*]$ and rigorously decreases in the interval $[x^*, b]$. Suppose $a \leq x_1 < x_2 < x_3 \leq b$ and $f(x_2) \geq f(x)$. Then the assumptions of monotonicity imply that $x^* < x_1$, and $[x_1, x_3]$ may be excluded from the next iteration. If $f(x_2) \leq f(x)$ then $[x_1, x_2]$ is excluded. Each iteration reduces in half the preceding interval and after N iterations the errors in determining x^* do not exceed $1/2^N$. A detailed block diagram of the pertinent algorithm is presented. 4 illustrations,

APPROVED FOR RELEASE: 06/23/11: CIA-RDP86-00513R001134700035-6

The program uses binary double precision with a relative frequency of 1.0. The program is written in FORTRAN for the IBM 360/65 digital computer. The program generates a random number

APPROVED FOR RELEASE: 06/23/11: CIA-RDP86-00513R001134700035-6

and $\mu_{\alpha} \rightarrow \mu$ according to the rule
 $\mu_{\alpha} = \lim_{n \rightarrow \infty} \mu_{\alpha_n}$.
Since M_{α} is constructed by mathematical induction in M . It
is clear that the frequency of $b_1 = 0$ or 1 can be obtained as close to
the average value of M as we want.

Thus M_{α} , together with the consistency of the transformation
of μ_{α} into μ , gives us a method for a construction of a sequence of pseudoran-
dom numbers by only one computer. For example, one can generate a sequence of
numbers with a given distribution μ and a given correlation coefficient ρ , if $|\rho| < 1$. This is a
very important result since

$$\left(\sum_{i=1}^m b_i \right) \text{mod } p = \left(\sum_{i=1}^m b_i' \right) \text{mod } p$$

APPROVED FOR RELEASE: 06/23/11: CIA-RDP86-00513R001134700035-6

Let A be a binary number of F bits representing some word A of F bits represented in modulo F .
 Let a_{ij} be the i -th bit of A and consider the following equation:

If a sample number $P > 0$, then the table τ is made up of M nonmono-
tonic functions, equal to the table A multiplied P times if and only
if P is divisible by M . It

APPROVED FOR RELEASE: 06/23/11: CIA-RDP86-00513R001134700035-6

number by is a pseudorandom number, consisting of N digits, such that a_0, a_1, \dots, a_{N-1} is replaced by $a_1, a_2, \dots, a_{N-1}, a_0$ mod 2.

number shifts if the word $a_0, a_1, \dots, a_{N-1}, a_N$ is replaced by $a_1, a_2, \dots, a_{N-1}, a_0$.

number is monotonic if it consists of only ones or only zeros.

number and $b_1, \dots, b_1, \dots, b_N$

C111/C122

holds, where

$$g\left(\frac{m}{B_n}\right) = G^*(\frac{m}{B_n}) .$$

The author proves the following
Theorem 1 : The condition

$$\sum_{k=1}^{\infty} \min_{0 \leq m < q} P\{\xi_k \not\equiv m \pmod{q}\} = \infty \quad (4)$$

is necessary and sufficient that for the sequence (1) with the distribution functions (2) the local limit-theorem holds in the strong form.
Theorem 2 states that condition (4) is necessary and sufficient also if (2) is replaced by

Card 3/4

On the local limit theorem for stable ... 3/052/02/007/002/002/005
S111/C272

where $|\psi_i(x)| \leq \alpha(x)$, $\alpha(x) \geq 0$ with $x \rightarrow \infty$, $0 < c' < c_i < c'' < \infty$, $i=1,2,\dots$
and $0 < \alpha < 1$.

Let further

$$B_n = \left(\sum_{i=1}^n c_i \right)^{\frac{1}{\alpha}}, \quad S_n = \sum_{i=1}^n \xi_i, \quad p_{kj} = P\{\xi_k = j\},$$

and let $G(x)$ denote a stable distribution function for which $\mu(x) = 0$,

$\kappa(x) = -\frac{1}{x}$, $\sigma^2 = 0$ and $f(\tau) = \frac{\alpha}{1-\alpha} \tau^{1-\alpha}$ in the Levy formula.

The local limit theorem holds for (1) in strong form, if for every sequence differing from (1) only by a finite number of terms, the relation

$$B_n P\{S_n = m\} - g\left(\frac{m}{B_n}\right) \rightarrow 0 \quad (3)$$

TITLE: A local limit theorem in the case of a stable limit distribution

SOURCE: Litovskiy matematicheskiy sbornik. v. 1, no. 1-2, 1961, 131-139

TOPIC TAGS: local limit theorem , random variable , stable law

ABSTRACT: Consider the sequence of independent random variables $\xi_1, \xi_2, \dots, \xi_n, \dots$ (1) with distribution function $F_1(x), F_2(x), \dots, F_n(x), \dots$ and assume that the sequence $\{F_k(x), k = 1, 2, \dots\}$ belongs to the domain of attraction of the stable law $G_\alpha(x)$, i.e. there exist constants $B_n > 0$ and A_n such that

$$P\left\{\frac{1}{B_n} \sum_{k=1}^n \xi_k - A_n < x\right\} \rightarrow G_\alpha(x) \quad (2)$$

as $n \rightarrow \infty$.

For the sequence (1) taking on only integral values, the author says that a local limit theorem holds if, as $n \rightarrow \infty$ uniformly in m ($-\infty < m < \infty$), then

Card 1/3

32512
S/044/617000/C011/033/0.5
C111/C444

On the multidimensional local limit ... depending on n, and if

$$\frac{1}{b_{ii}^{(k)}} \sum_{|j_i - a_i^{(k)}| < N} (j_i - a_i^{(k)})^2 P \left\{ \xi_j^{(k)} = j_i \right\} \rightarrow 1$$

for $N \rightarrow \infty$, $i=1, \dots, s$, uniformly with respect to k, then in order the local limit theorem in the strong sense to hold for the sequence $\xi(1), \xi(2), \dots$, it is necessary and sufficient that for all integers q and for all vectors (a_1, \dots, a_s) with integer components $a_1, \dots, a_s, a_1^{(n)}, \dots, a_s^{(n)}$ $a_1^{(n)} + \dots + a_s^{(n)} = 1$ there holds

$$\sum_{k=1}^{\infty} \min_{0 \leq m < q} P \left\{ a_1 \xi_1^{(k)} + \dots + a_s \xi_s^{(k)} \not\equiv m \pmod{q} \right\} = \infty.$$

S/044/61/000/011/035/049
C111/C444

On the multidimensional local limit ...
 It is said that for the sequence $\xi^{(1)}, \xi^{(2)}, \dots$ the local limit theorem holds, if for $n \rightarrow \infty$, uniformly with respect to

$$z_1, \dots, z_s \sqrt{B_{11}^{(n)} \dots B_{ss}^{(n)}} P_n(z_1, \dots, z_s) - p(z'_1, \dots, z'_s) \rightarrow 0$$

where

$$p(x_1, \dots, x_s) = (2\pi)^{-\frac{s}{2}} \Delta^{-\frac{1}{2}} \exp \left\{ \frac{-(x_i - A_i)^T B^{-1} (x_i - A_i)}{2} \right\}$$

$A_i = \frac{z_i - A_i}{\sqrt{B_{ii}^{(n)}}}$, B is the matrix of the covariations of the stochastic variables $\xi_1^{(n)}, \dots, \xi_s^{(n)}$, Δ is the determinant of B . Further on

it is said that for the sequence $\xi^{(1)}, \xi^{(2)}$ the local limit theorem holds the strong sense, if for every sequence, only differing from the given one by a finite number of terms, the local limit theorem holds. Under these suppositions and with these notations the following result is stated: If

$B_{ii}^{(n)} \rightarrow \infty$ for $n \rightarrow \infty$, $i = 1, \dots, s$, $\Delta > c$, where $c > 0$ not

TITLE: Crystalline glass material with piezoelectric properties
SOURCE: AN GruzSSR. Soobshcheniya, v. 43, no. 1. 1966, 105-108
TOPIC TAGS: piezoelectric property, glass product, glass property
ABSTRACT: Thermal treatment of glass of the system B_2O_3 - Bi_2O_3 - TiO_2 - BaO , with subsequent polarization, results in partial crystallization which imparts piezoelectric properties to the material. Electrical properties of this product were studied. The starting material was subjected to thermal treatment of 625 and 690°C because thermographic analysis has shown formation of two distinct crystalline forms at these temperatures. The thermally treated product was polarized at room temperature in an electrical field of 15 kv/cm. The piezomodulus, measured by a static method, was found equal to $1.1 \cdot 10^{-8}$ electrostatic units. Dielectric permeability, measured at 20 to 580°C, varied from 73 to 186. It was assumed that crystals of the type $Ba_{1+n}^{l+n} Bi_4 Ti_{4+n} O_{12+3n}$, where $n = 1, 2, 3$, were formed during the crystallization process

TITLE: Possibilities of manufacturing multigrade oils in the Rumanian People's
Republic

SOURCE: Petrol si gaze, v. 16, no. 3-4, 1965, 234-246

TOPIC TAGS: petroleum product, petroleum refining, fuel and lubricant additive

ABSTRACT:
The authors discuss laboratory tests performed with a view to the manufacture in Rumania of the multigrade oils SAE 10w-30 HD and SAE 20w-40 HD from Rumanian raw materials plus imported additives. The multigrade oils produced in the laboratory were found to have characteristics similar to those of imported oils of the same type, leading to the conclusion that their manufacture in Rumania is possible and advantageous.

TITLE	: Testing the Resistance of Wheat Varieties to Bunt (<i>Tilletia caries</i> f.sp.) by Method of Artificial Contamination
ORIG. PUB.	: Acta agrobot., 1956 (1957), 5, 139-145
ABSTRACT	: In tests made at the experimental station of seed cultivation at Cracow in 1949-1954 with artificial contamination using the Rhoener-Bartoli [?] method, 57 summer wheat varieties were investigated among which 33 varieties are cultivated in Poland. 43 varieties of <i>Triticum vulgare</i> and <i>T. durum</i> were more or less infected by bunt. Among the summer wheat created through breeding in Poland, no varieties appeared which were
